RE: Site Management Activities Completed, Old Pioneer Building, Bennington
(SMS Site #97-2288)

Dear Mr. Post:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the August 8, 2001 letter of monitoring well closure from Heindel and Noyes concerning the above referenced site. Based on a review of the file, the current conditions at this site and the results of the information submitted, the SMS has determined that this site meets the Waste Management Division's Sites Management Activities Complete (SMAC) policy.

This means that the SMS has determined the following:

- ☐ there is no ongoing source of contamination at this site;
- ☐ groundwater under the site currently meets Vermont Groundwater Enforcement Standards;
- ☐ the site does not pose an unreasonable risk to human health or the environment.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release the property owner from any past or future liability which may arise from the chlorinated solvent contamination which was identified at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the 1997 release. If any additional information comes to light in the future, then the SMS may reconsider this determination.

If you have any questions with the requirements of this letter, please feel free to contact me.

Sincerely,

George Desch, Chief
Waste Management Division
